

The things that are not obvious

Root: Tournament Edition

The numpad hover a piece and press

- 0** **Send it home**
Warriors and wood go back into their supply bag, buildings and tokens into the rightmost empty slot of their kind. Locked pieces, cards and hirelings are left alone.
- 2** **Take a token or building**
Hold one second on a piece to choose its kind. Each tap then brings one of that kind to your pointer.
- 4** **Set the home**
Select pieces and *hold one second*: their spots become the home row of that kind. Numpad 0 fills it one per spot, then the supply; numpad 1 and 2 take from it first. A new numpad 4 on a kind replaces its row.
- 1** **Take a warrior**
One of your warriors appears at your pointer: from the row set with numpad 4 first, otherwise from your supply.
- 3** **Knave prisoner**
Lays the hovered warrior flat, locked, outlined in black. Press again to stand it up.
- no pad** **No numpad**
Bind the five keys in *Options* — *Game Keys*. They start with "Move back to supply", "Move a warrior", "Move any token", "Set warrior as a knave prisoner", "Set home of selected pieces".

The box score beside the map

- Reads the VP markers on the track. Rows follow the seats. Each turn pass writes the finishing faction's score; a point scored before your turn shows at once.
- A marker settled on a dominance card records turn and suit and offers **DOM WIN**. A Vagabond or the Knaves get **COALITION** instead.
- END TURN** records the highlighted faction when the TTS turn order is off.
- EDIT**: click a cell to type a score, a column number to set the round, a portrait for whose turn it is, ▲ to reorder, ▼ for leader, captains or character, plus **MAP** **DECK** **UNPICKED** and the game name.
- EXPORT** writes the game to the Notebook tab "BoxScore" and opens a box for the Root Database token.
- INFO** is the manual.

The VP panel above each Crafted Improvements board

- +** move that faction's marker one step.
- DRAW 1 CARD** deals one to your hand. **DRAW POND** draws from the frog pond.
- Only the faction's owner can use it.

The turn panel next to the box score

- ROUND** comes from the box score. The clock is the turn in progress.
- START**: turn 1, shuffles the deck, clears the sheet. Asks first when the sheet holds a game.
- DEAL 5 CARDS** to every seat. Asks before a second deal.
- PAUSE** / **CONTINUE** stop and resume the clock.
- The panel flashes red after twenty minutes.

The draft

- Seats and turn order are random. Each seat gets a selector board; the first click takes that faction.
- Your faction is the one you picked last. Numpad 1, numpad 2 and the VP panel follow it.
- Knaves: four captains dealt, keep three. A captain card in a board slot spawns its meeple, items and warrior.

The deck holder

- A card dropped on the discard turns face up.
- A dominance card goes to its slot, a frog card to the pond, shuffle-on-discard cards into the deck.
- A card dropped on the pond turns face up. The draw pile is never touched.

Resync setup board, bottom row

- Re-sends every object to every player. Use it when someone is missing pieces or sees card backs.
- Does not run while anyone holds a piece with the mouse. Cards in the hand are fine.
- Afterwards a duplicated loose card is removed.

The setup board

- A button that wipes something turns red and asks. Press again within three seconds.
- A new game leaves the map; a map button leaves the factions. The Marsh is rebuilt when the player count changes.
- The box score and the turn panel are never destroyed.
- MORE**: **RIVERBOAT** (Flotilla hireling) and **CREDITS**.
- FACTION CARDS** also lays out the vagabond characters.
- The snap points beside the suit markers take enclaves only.
